

# AIRLESS BOTTLE TIPS

1. Prime the pump by placing your finger over the nozzle that dispenses the product. Depress the pump 8–10 times. Remove your finger from the nozzle and dispense the product.
2. If this is unsuccessful, turn the bottle over and you will see a small pin-sized hole in the bottom. Open a paperclip until it is straight and insert the straight end into the opening. Push up on the paperclip and the disc will rise up the bottle. Once you have pushed the product up as far as you can, depress the pump and dispense the product.
